

Sievert EBK-1 & EBK-2

Granule Embedders

Embedding granules on a granular modified bitumen membrane is becoming more of a requirement. That is why we are proud to offer our new EBK-1 and EBK-2 bedding tools. The EBK-1 is our detail kit. It's perfect for those hard to reach places. The EBK-2 is our stand-up kit; great for longer lap runs.

Both kits come with a fully adjustable and removable embedding tool with handle attachment. This feature provides the roofer with 2 torch tools in 1. Kits come complete with a 25' U/L listed hose, brass hand tighten regulator and spark lighter.
